

Container-native gaming

Powered by Fedora and Universal Blue

Presented by
Noel Miller

About me

- Noel Miller!
- Been gaming for a while
- Project Manager and Core Contributor at Universal Blue
- Work at Red Hat
- Use Bazzite as my primary OS
- Love spending time with my family (and pets)
- Big Metal Head

State of PC, Console, and Handheld Gaming

- Everything is a PC now
- Consoles are great, purpose built experiences
- Nintendo Switch and Steam Deck changed everything
- Good PCs have become more affordable
- Steam and Proton has made gaming on Linux possible

What is Bazzite?

- Built on [Fedora Atomic](#) and [Universal Blue](#)
- Excellent gaming experience on your desktop, laptop, and handheld
- Familiar experience to a gaming console
- First class support for gaming using Steam

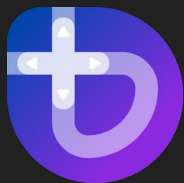

Bazzite Features

- Automated updates
- Easy Rollback
- Driver Support Built-in
 - Game Controllers
 - GPU Drivers
- Desktop Environment Options
 - Gnome (MacOS-like)
 - KDE (Windows-like)
- Steam is preinstalled

Bazzite vs Windows

- Community Owned
- Completely free to use
- Smaller on disk install size
- Easy Rollback
- Drivers are built-in
- Optimized for all device types
 - Desktop
 - Laptop
 - Handheld

- Owned by a large corporation
- Requires you to pay for a license
- Larger on disk size
- Difficult to rollback
- Requires you to install drivers for best experience
- Only optimized for desktops and laptops
